

Indoor Water Conservation Tips

NORTHWEST FLORIDA WATER MANAGEMENT DISTRICT

Indoor water use comes from our day-to-day home activities. The following indoor water conservation tips can help lower your water use and your water bill.

ACTIONABLE TIPS FOR YOUR HOME

Bathroom Faucets

Turning the water off while brushing your teeth can save up to **8 gallons a day**. Turning the water off while shaving will save even more!

Showers & Baths

Upgrading to low flow shower heads can save almost **900 gallons per year**. Limiting time in the shower will also conserve water.

Appliances

Waiting to run the clothes washer or dishwasher until they are full reduces the amount of water used compared to repeated cycles.

Toilet Upgrades

Upgrading to ultra low flow toilets can save up to **9,000 gallons a year** compared to older models.

SMART MONITORING

Track Your Usage & Detect Leaks

Monitor your bill each month to look for unsuspected rises in water use. This is one of the most effective ways to identify unknown or hidden leaks early before they cause damage or costly bills.

Every drop counts. Conserving water today ensures a sustainable supply for northwest Florida's future.
